

concord in the presence of her basswood park, the gentlemen from Indiana, who were quietly drinking in the beauties of the exposition and thanking God that he was an American citizen. Benjamin Harrison did not smoke, but he was a great admirer of smoking Spanish cigarettes or singing barcaroles in the gondolas or acquiring a "disposition" at a wet banquet. In short, he was a first-class royal in his conduct at the exposition.

But yesterday when he arose in his place at the dedication of the Indiana building to a "thrill of the republic" around the feet of a private citizen of the greatest nation of earth, he was given a public ovation which was spontaneous and unpremeditated, completely beyond the expectations accorded to Spain's blue-blooded envoys.

He deserved it. He has the highest office in the gift of the American people and has served his country faithfully and well. The great Colombian success to his personal friendliness as the chief executive of the Nation. Unless we mistake yesterday was one of the proudest occasions of Mr. Harrison's whole career.

How to Prolong Life.

William Kissam Vanderbilt Review.

We cannot defy death. But we may, by searching, find certain secrets of nature and apply them to the renewal of the organs whose decay is constantly going on. To attract the popular attention, the investigations show that the chief characteristics of old age are deposits of earthly matter of a gelatinous and fibrinous nature. Carbonate and phosphate of lime, mixed with other salts of a calcareous nature, have been found to furnish the greater part of the material which the microscope shows, man begins in a gelatinous condition; he ends in an osseous or bony one—soft in infancy, hard in old age. By gradual change the material changes, and the ossification comes on, but after passing middle life a more marked development of the osseic character takes place. Of course, with the change in the material, the physical organs naturally interfere with their functions. Partial ossification of the heart produces an imperfect circulation of the blood which advances to a blood clot. When the arteries are clogged with calcareous matter there is interference with the circulation upon which nutrition depends. Without sufficient nutrition, the vitality of the body. Hence in his work, "The Physiology of Common Life," G. H. Lowe states that "the vitality of the body is lost in connection with the waste, life would only be terminated by accident, never by old age." Both Bichat and Baillie considered that the greater number of people past sixty years of age die from the effects of the waste which brings about obstructions in the proper and healthy circulation of the blood.

Apple-Tree Borer.

Country Gentleman.

The remedy for destroying the borer in apple trees is simple and easily applied with a small flexible wire thrust into their holes, is well known. It may be used during any of the two or three years of the life of the insect, and it will save the trees if these insects have not been allowed to bore a headway. But a remedy which will exterminate the borer from the tree is more valuable. Among the different remedies used for this purpose, we observe one which is recommended and used by J. S. Woodworth, and is not "portentous" as the cultural journals. It consists of a hard crust encircling the tree, made of milk and hydraulic cement applied with the trowel, and the tree is buried in the ground up two or three feet. One or two coats of this mixture forms a solid casing which the insects cannot penetrate. The insects are not "portentous" as the cultural journals. The account merely states that the remedy consists of skim milk and water-lime, but does not say in what proportion the mixture is made.

How to Order on the European Plan.

Detroit Free Press.

"People in general do not know how to order on the European plan," said a local bon vivant yesterday, "and when they have arisen from the table they are confronted with a huge bill in which every item looms up and they are at a loss to know what to do. They complain to the manager, and thus save individual expense to them that they should have saved by ordering on the European article for each, where the one portion for two would have been sufficient. When a man enters a cafe of this kind he should be told that he is on the European plan, and it is when he has had the experience of paying for his meal. In this half portion he will find sufficient to eat to satisfy the most voracious appetite, and he will be reminded that the best part of it behind him."

paid to this rule a traveler will find that he can live as cheaply at a hotel of this kind as at any other."

Curious to the End.

London Tid Bits

Mr. Sampson (passionately)—I love you devotedly, Miss Chumley, but my pecuniary affairs have prevented my making a declaration until now. But I have put enough away now to feel justified in asking you to become my wife.

Miss Chumley (hesitatingly, but sweetly)—I confess that I am not wholly indifferent to you, but—but—

Mr. Sampson (interrupting)—What, dear?"

Miss Chumley (sighing)—Telling me how much you have put away."

A Day of Rest.

There should be a day of rest, and the first-day of the week seems to be the best day to set apart in this quarter of the world. But what is rest? What but the release from the grind of the secular week? Some rest by sitting down in a quiet place, some sleep Sunday away, some make it a day of worship, some seek the parks and country woods. This is a free country.

Rain Maker Killed by an Explosion.
MINNEAPOLIS, Kan., June 17.—A fatal accident occurred here to-day during the bombardment of the heavens by a number of rain-making enthusiasts. Several discharges had been successfully made, when one of the cannons in use exploded, instantly killing S. Fredmond and fatally

captain of a company of the State militia at this point.

Movements of Steamers.

BOSTON, June 17.—Arrived: Pavonia, from Liverpool; Prussian, from Glasgow; Nessmore, from London.

NEW YORK, June 17.—Arrived: Belgen, from London; Prussian, from Glasgow; Nessmore, from London.

LONDON, June 17.—Sighted: La Bourgogne, from New York.

Not Particular as to Terms.

Life.

"Might I be so bold as to hope that you would one day become my wife?"

"Your wife, Mr. Bondholder! But con-
